

PRIME.txt

help

HELP command-name

.
to get information on that command

.\$\$ Stores batch job submittal options inside command file
* /* Command file comment lines
ABBREV Abbreviation processor
ADDDISK (Operator command)
ADD_REMOTE_ID Sets up user id for remote systems
AMLC (Operator command)
ARCHIVE Archives disk files to tape
ARCHIVE_RELEASE Releases an ARCHIVE tape for future use
ARCHIVE_RESTORE Restores files archived on tape to disk
ASRCWD Sets virtual ASR control word
ASSIGN Assigns peripheral device
ATM Invokes OAS Advanced Text Management module
ATM_ADMIN (Replaced by OA_ADMIN command)
ATTACH Attaches to a UFD, sub-UFD, or MFD
AVAIL Prints disk usage statistics
BACKUP Logical disk-to-tape backup (operator command)
BACKUP_RELEASE Releases BACKUP tape for future use (operator command)
BACKUP_RESTORE Restores backup files from tape to disk (Operator)
BASIC Loads Prime BASIC language interpreter
BASICV Invokes virtual-memory BASIC
BATCH Displays Batch information
BATGEN Displayf information about Batch queues
BINARY Opens binary file
BIND Linking command (V-mode and I-mode)
BOOT_CREATE Creates a boot tape
BRMS (Backup/Recovery Management Service)
CBL Invokes COBOL 74 compiler
CBLDML CBL (COBOL 74) DML Preprocessor
CBLSUBS COBOL 74 Subschema DDL Compiler
CC Invokes C compiler
CDML COBOL DML Preprocessor
CHANGE_PASSWORD Changes the user's login password
CHAP Changes the user's execution priority level
CLOSE Closes file unit(s)
CLUP ROAM Command Processor Clean-Up Program
CMPF Compares up to five ASCII files
CNAME Changes name of file or directody
CN_RBF Changes name of a ROAM user file
COBOL Invokes COBOL compiler
COMINPUT Executes a command input file
COMOUTPUT Opens command output file
COMPILERS (Prime's Compilers)

PRIME.txt

CONCAT	Combines files for spooling
CONFIG	(Operator command)
CONFIG_NET	(Network Administrator Command)
CONVERT_AMLC_COMMANDS	(Operator Command)
COPY	Copies file system objects
COPY_DISK	(Operator command)
COPY_RBF	Replicates or moves a ROAM file
CPL	Executes a CPL program
CPMPC	Punches a file onto cards
CREATE	Creates a new directory
CREATK	Creates and modifies MIDASPLUS file templates
CRMPC	Reads cards into a file
CSUBS	COBOL Subschema DDL Compiler
DATE	Displays current time and date
DBACP	Data Base Administrator Command Processor
DBASIC	Loads Prime BASIC language interpreter
DBG	Invokes Source Level Debugger
DBUTL	Data Base Utility
DEBUGGERS	(Prime's debuggers)
DEFINE_GVAR	Activates a global variable file
DELAY	Sets terminal delay characteristics
DELETE	Deletes files or directories
DELETE_RBF	Deletes an active or inactive ROAM file
DELETE_VAR	Deletes global variables
DELSEG	Deletes segments
DIAG	PRISAM File Diagnostic Utility
DISCOVER	DBMS and PRISAM Query Language and Report Writer
DISKS @	(Operator command)
DISLOG	Logs out disconnected user (Configuration Directive)
DMSTK	Dumps user stack information
DOCUMENTS	(List of current technical publications)
DPTCFG	Compiles DPTX configuration file
DPTX	(Operator command)
DPTXMTR	DPTX monitoring utility
DROPDTR	Forces dropping of Data Terminal Ready signal
ED	A line-oriented text editor
EDB	Invokes binary editor
EDITOR	(Text Editor)
EDIT_ACCESS	Modifies an existing ACL
EDIT_EFU	Creates/modifies a file of formatting parameters (PRIME/SNA)
EDIT_PROFILE	Creates and updates system validation files
EDUCATION	Lists the current customer classes offered
ELIGTS	(Operator command)
EMACS	Screen-oriented editor
EPF	(Dynamic runfiles)
EVENT_LOG	(Operator Command)
F77	Invokes FORTRAN 77 compiler
F77DML	FORTRAN 77 DML Preprocessor

	PRIME.txt
F77SUBS	FORTRAN 77 Subschema DDL Compiler
FAP	FORMS Administrative Processor
FAU	PRISAM File Administrator Utility
FDL	FORMS Definition Language
FDML	FTN DML Preprocessor
FED	FORMS Editor
FILMEM	Zeroes out memory
FILVER	Compares runfiles
FIND_RING_BREAK	(PRIMENET operator command)
FIXRAT	(Operator command)
FIX_DISK	(Operator command)
FORMS	Forms Management System
FORTRAN	(Prime's two FORTRAN compilers)
FSUBS	FORTRAN Subschema DDL Compiler
FTGEN	FTS System Administrator Command
FTN	Invokes FORTRAN IV Compiler
FTOP	FTS Operator Command
FTR	FTS File Transfer Request Command
FTS	Communications File Transfer Service
FUTIL	File utility
GENERATE_CATALOG	Generates ARCHIVE or TRANSPORT catalog
HDXSTAT	Displays status of half duplex lines
HELP	Prints information at terminal
INFO	Invokes Prime INFORMATION System
INITIALIZE_COMMAND_ENVIRONMENT	Reinitializes user's environment
INPUT	Opens file for input
IROAM	Initializes ROAM at supervisor terminal
ITERATION	Command repetition (multiple arguments)
JOB	Submits, manages, and monitors batch jobs
KBUILD	Builds MIDASPLUS files
KIDDEL	Deletes or cleans out MIDASPLUS files
LABEL	Initializes magnetic tapes
LANGUAGES	(Prime's Programming Languages)
LATE	Sets time at which terminal will accept next command
LD	Lists contents of a directory
LEM	Lists the extent map of a contiguous file
LISTF	Displays information on current directory
LISTING	@ Opens listing file
LIST_ACCESS	Displays ACL protecting an object
LIST_CATALOG	Displays contents of ARCHIVE or BACKUP catalogs
LIST_EPF	Displays information about user's EPFs
LIST_GROUP	Displays list of user's ACL groups
LIST_LIBRARY_ENTRIES	Displays entrypoints in a library EPF
LIST_LIMITS	Lists limits of user's command environment
LIST_MINI_COMMANDS	Lists commands allowed at mini-command level
LIST_PRIORITY_ACCESS	Lists a priority ACL
LIST_QUOTA	Lists disk quota information
LIST_RBF	Describes the attributes of a ROAM file

PRIME.txt

LIST_REMOTE_ID	Lists user's remote IDs
LIST_SEARCH_RULES	Lists contents of user's entrypoint search list
LIST_SEGMENT	Displays information about private segments
LIST_TAPE	List contents of an ARCHIVE, TRANSPORT, or BACKUP tape
LIST_VAR	Lists contents of global variable file
LOAD	Loading command (R-mode)
LOGIN	Gains access to system
LOGOUT @	Ends terminal session
LOGPRT	Displays system event log
LON	Controls Phantom Logout Notification
LOOK	(Operator command)
MAGNET	Magnetic Tape Interchange Subsystem
MAGRST	Writes files from Prime-format tapes to disk
MAGSAV	Writes disk file(s) to tape
MAGTAPE	(PRIMOS Magnetic Tape Subsystems)
MAKE	(Operator command)
MAXSCH	(Operator command)
MAXUSR	(Operator Command)
MDUMP	Dumps a MIDASPLUS file
MEDUSA	Brings up PRIME MEDUSA workstation
MESSAGE	Sends message to users or operator
MONITOR_NET	Monitors network activity on a system
MONITOR_RING	Monitors network activity on a node
MPACK	Reclaims space in MIDASPLUS data and index subfiles
MPLUSCLUP	Performs MIDASPLUS cleanup
MRGF	Merges several files into one
MTRESUME	(Operator command)
NAME GENERATION	(Multiple, similar objectnames)
NCOBOL	Invokes non-shared COBOL
NET	(Operator command)
NETCFG	(Obsolete command)
NETLINK	PRIMENET remote login facility
NSED	Invokes non-shared editor
NUMBER	Numbers statements in a BASIC program
OAS	Invokes Office Automation System
OA_ADMIN	Invokes OAS administrator functions
OA_TERM	Downloads PT65 Workstation
OFFICE_AUTOMATION	(Office Automation System commands)
OPEN	Opens file on specified unit
OPRPRI	(Operator command)
ORIGIN	Returns to origin directory
OWLDSC	Makes Owl terminal emulate 3277, under DPTX
PASCAL	Invokes PASCAL compiler
PASSWD	Sets password on current directory
PHANTOM	Starts phantom execution of CPL or COMINPUT file
PHYRST	Restores partition from physical backup
PHYSAV	Physical disk-to-tape backup
PL1G	Invokes PL/I-G compiler

PRIME.txt

PM	Prints RVEC and register information
PMA	Invokes Prime Macro Assembler
POWER	Invokes the POWERPLUS Data Management Subsystem
POWERPLUS	(MIDASPLUS Query Language and Report Writer)
PRERR	Displays ERRVEC message
PRIME/SNA	(Prime-IBM Interconnect System)
PRIMENET	Prime's networking software
PRIMEWAY	(Prime's transaction management and development system)
PRIMIX	Invokes PRIMIX
PRIMOS	(Operator command)
PRINT_NETLOG	Network logfile utility
PRINT_SCS	Prints a file containing SCS data streams (PRIME/SNA)
PRINT_SYSLOG	System logfile utility
PRISAM	(Prime's Recoverable Indexed Sequential Access Method)
PRMPC	Prints file on parallel interface printer
PROP	Displays information about system printers
PROTEC	(Earlier form of PROTECT command)
PROTECT	Sets protection rights on file in password directory
PRSER	Prints file on serial interface printer
PRTDSC	Controls DPTX printer emulation
PRVER	Prints file on printer_plotter
PSD	Loads Prime Symbolic Debugger
PSD20	Loads Prime Symbolic Debugger
PST100DSC	(Replaced by PTDSC command)
PT45DSC	Makes PT45 terminal emulate 3277, under DPTX
PT46DSC	Makes PT46 terminal emulate 3277, under DPTX
PTDSC	Makes PST 100 or PT200 terminal emulate 3277, under DPTX
PTELE	Accesses OAS Telephone Inquiry
RDY	Sets system and error prompts
RELEASE_LEVEL	Discards unwanted stack history
REMOTE	(Obsolete command)
REMOVE_EPF	Removes EPF from user's address space
REMOVE_PRIORITY_ACCESS	(Operator command)
REMOVE_REMOTE_ID	Removes user id from remote ID list
REN	Reenters a subsystem
REPLY	(Operator command)
RESTOR	Restores runfile to memory
RESTORE_RBF	Activates an inactive ROAM file
RESUME	Executes program
REV202	Lists releases of software valid for Rev. 20.2 PRIMOS
REVER(_PASSWORD)	Reverts an ACL directory to a password directory
RJE	(Remote Job Entry)
RJOP	Controls RJE workstations
RJQ	Queues an RJE file for transmission to a remote site
ROSAU	ROAM System Administrator Utility
RPG	Invokes RPG II compiler
RSTERM	Empties terminal input or output buffers
RUNOFF	Text formatter

PRIME.txt

RWLOCK	Sets read-write lock on a file or directory
SAVE	Saves runfile to disk
SAVE_RBF	Archives a ROAM file to disk
SCHDEC	The Schema Decompiler
SCHED	The Schema Editor
SCHEMA	The DBMS Schema Compiler
SEG	Loading and execution command (V-mode)
SETIME	(Operator command)
SETMOD	(Operator command)
SET_ACCESS	Sets protection on a file or directory
SET_ASYNC	(Operator Command)
SET_DELETE	Sets tPe delete switch on a file
SET_PRIORITY_ACCESS	(Operator command)
SET_QUOTA	Sets quota on a directory
SET_RBF	Sets the attributes of a ROAM file
SET_SEARCH_RULES	Initializes user-specific entrypoint search list
SET_VAR	Sets value of a global variable
SHARE	(Operator command)
SHUTDN	(Operator command)
SIZE	Displays size of files, segdirs, ufds, and ACLs
SLIST	Displays file contents at terminal
SNADSC	Provides terminal emulation under PRIME/SNA
SNA_3270	(PRIME/SNA Operator command)
SNA_3270_CONFIG	(PRIME/SNA Administrator command)
SNA_PRINT	(PRIME/SNA Operator command)
SNA_SERVER	(PRIME/SNA Operator command)
SNA_SERVER_CONFIG	(PRIME/SNA Administrator command)
SORT	Sorts one or more fRles
SPOOL	Prints file on system printer or plotter
SPSS	Invokes SPSS product
SPY	Displays MIDASPLUS system statistics and configuration variables
START	Starts program in memory
STARTUP	(Operator command)
START_NET	Starts PRIMENET on local node
STATUS	Displays user or system status
STOP_NET	Disables PRIMENET on local node
SVCSW	Sets switch to handle SVC instructions
TCF	Accesses remote IBM host from DPTX-configured 3277
TERM	Modifies terminal characteristics
TERMCAP	(Terminal capability database for EMACS)
TIME	Displays time-used statistics
TP	Invokes PRIMEWAY
TPLINK	Invokes PRIMEWAY via network
TRANSLATORS	(Prime's Translators)
TRANSPORT	Writes disk files to tape for transfer to another site
TRANSPORT_RELEASE	Releases TRANSPORT tape for future use
TRANSPORT_RESTORE	Restore TRANSPORT files from tape to disk
TREEWALKING	Inclusive pathname

	PRIME.txt
TYPE	Prints line of text at terminal
UNASSIGN	Unassigns a peripheral device
UPCASE	Converts lowercase to uppercase
USAGE	Prints system usage statistics
USERS	Prints number of currently logged-in users
USRASR	(Operator command)
VISTA	DBMS/QUERY Query Language and Report Writer
VPSD	Loads Prime Symbolic Debugger
VPSD16	Loads Prime Symbolic Debugger
VRPG	Invokes V-mode RPG II compiler
VRTSSW	Sets virtual sense switches
WILDCARDS	(Automatic filename generators)
WP_ADMIN	(Replaced by OA_ADMIN command)

From Sky-Hook (Switzerland)
