Disclaimer: I am in no way responsible for any damages, accidents, or injuries incurred while working on ANY experiments presented in the following file/files. I did not make you do these experiments, this is for information ONLY.
Have Fun!!!!

Detonators:

The following section will deal with common detonators made using simple electronic components found at your local radio shack.....

One type of excellent detonator is the ELECTROLYTIC CAPACITOR. The electrolytic capacitor does not like to be reverse biased, when reverse biased a small one will fizzle a bit and moke, but a large capacitor will EEXXPPLLOODDEE. Voltage should be about 12 0 volts for this. Simply stick the capacitor into your bomb, maxi-pad etc... hook it up to any type of switch flip the switch and the capacitor will explode, and so will your bomb.

Another electronic detonator:

Another extremely simple detonator can be created using a solar ignitor. You will need a SOLAR IGNITOR, 9v BATTERY, 3 FLEXIBLE WIRES, A SWITCH, 9v BATTERY CLIP. I will give you step by step instruction on the assembly of this device so the even po indexer out there will understand:

1) Connect two wires to the switch, one to battery clip, one to a solar ignitor lead.

2) connect the third wire from the other battery clip wire the the last solar ignitor lead.

There it is, flip switch and go....

Yet another electronic detonator:

By far this is the simplest detonator and easiest to build. All you will need is a flashlight light bulb, a 9v battery (the more powerful the battery the better of course) and a switch. rig the battery and the bulb to the switch, pack it into your explosive, flip switch and watch your handiwork. One more thing make sure to break the glass so there is only the silver part and the filament showing.

A nasty prank:

So ya wanna give your "buddy" the shock of his life..... Charge up an electrolytic capacitor.

*WARNING: Electrolytic capacitor store electricity for indeterminate time periods never touch the cap!

Ok now that it is charged take a pair of insulated tongs and whip it at your "buddy", I garuntee he'll think twice before he comes over to your house again. (he,he)

ADDRESSES

Here are the addresses to a couple of less reputable places that can send you plans to many of the things you may be interested in.

XANDI ELECTRONICS, box 25647, 32s, tempe, az 85282. \$1.00 for catalog they sell plans for fm bugs, voice disguisers etc....

JD'S ELECTRONICS, dept. q, box 9042, wichita, ks 67277. \$2.00 catalog same type as the above adress.

Cable Tv secrets-the outlaw publication the cable companies tried to ban. Book for 8.95 (rip off???) CABLE FACTS, box 711h, pataskala, oh 43062

ED.TXT

TECHNOLOGY SERVICES, 829 gingette street, gretna, la 70056 \$2.00 catalog.. like
first
company

call

Look for the next file in this ever-growing series---

Bomb making

Until then you should try to get a hold of the commando files 5 and 6 by
Elliot
ness they tell about night prowling, camo etc...

bye
